

Sealtron's 8500/8600 series of hermetically sealed connectors meet or exceed the requirements of MIL-C-26500. The 8521/8602 series are dimensionally equivalent to MS27034 and MS24265 respectively. The 8503/8603 has the same mounting dimensions as MS24264.

MIL-C-26500 does not specify the shell material, nor does it specify the plating for the shell and contacts for hermetic class connectors. Sealtron offers as standard connectors, cold rolled steel shell plated fused tin, 300 Series passivated stainless steel shell, or 300 Series stainless steel shell plated fused tin. Either eyelet or solder pot contacts with fused tin plating are offered as standard. Other contact styles and plating combinations are available for your specific needs.
